The Server Labs participates in ESAW

The Server Labs has once more participated actively in the European Ground Systems Architecture Workshop (ESAW) which has been organised with the support of the European Space Agency's (ESA) Directorate of Operations and Infrastructure.

18th May, 2011: The Server Labs (TSL) has contributed actively to the success of the 3rd ESAW conference with both a technical presentation and the creation of a large-scale poster explaining the application of Cloud computing to Ground System Architectures.

The conference, which brought together nearly 300 Ground Systems architects and experts, aimed to be a platform for an open and constructive exchange of ideas.

The Server Labs delivered a presentation on SOA4GDS "Evaluating the suitability of emerging service-based technologies in ground data systems".

The SOA4GDS project is a study for the ESA Basic Technology Research Project (TRP) which has been conducted jointly by The Server Labs and VEGA to assess whether new technologies, like for example SOA, can support the technical requirements of ESA/ESOC's ground data systems.

The poster provided the participants with a schematic overview of Cloud architectures applied to ESA's Ground Data Systems. In addition it detailed the already successful application of the Cloud for ESA's prestigious Gaia project and outlined the positive difference it could make in two other application scenarios, namely the Mission Control System (MCS) and the Software Development Environment (SDE).

Notes to the editors:

The Server Labs

The Server Labs (TSL) is a specialist IT Consultancy and Development Company and a leading authority in Cloud Computing services. Founded in 2004, The Server Labs focuses on the design and implementation of IT architectures and advanced software engineering projects, working with the most advanced solutions and technologies and offering its clients cost-effective, scalable and high performance solutions.

TSL's customer groups are predominantly large and medium-sized corporations, which share a growing need for cost effective and scalable IT solutions. TSL has offices in Spain, Germany and the UK. Most recently TSL started partnering with Amazon and RightScale to facilitate the adoption of Cloud Computing in Europe.
